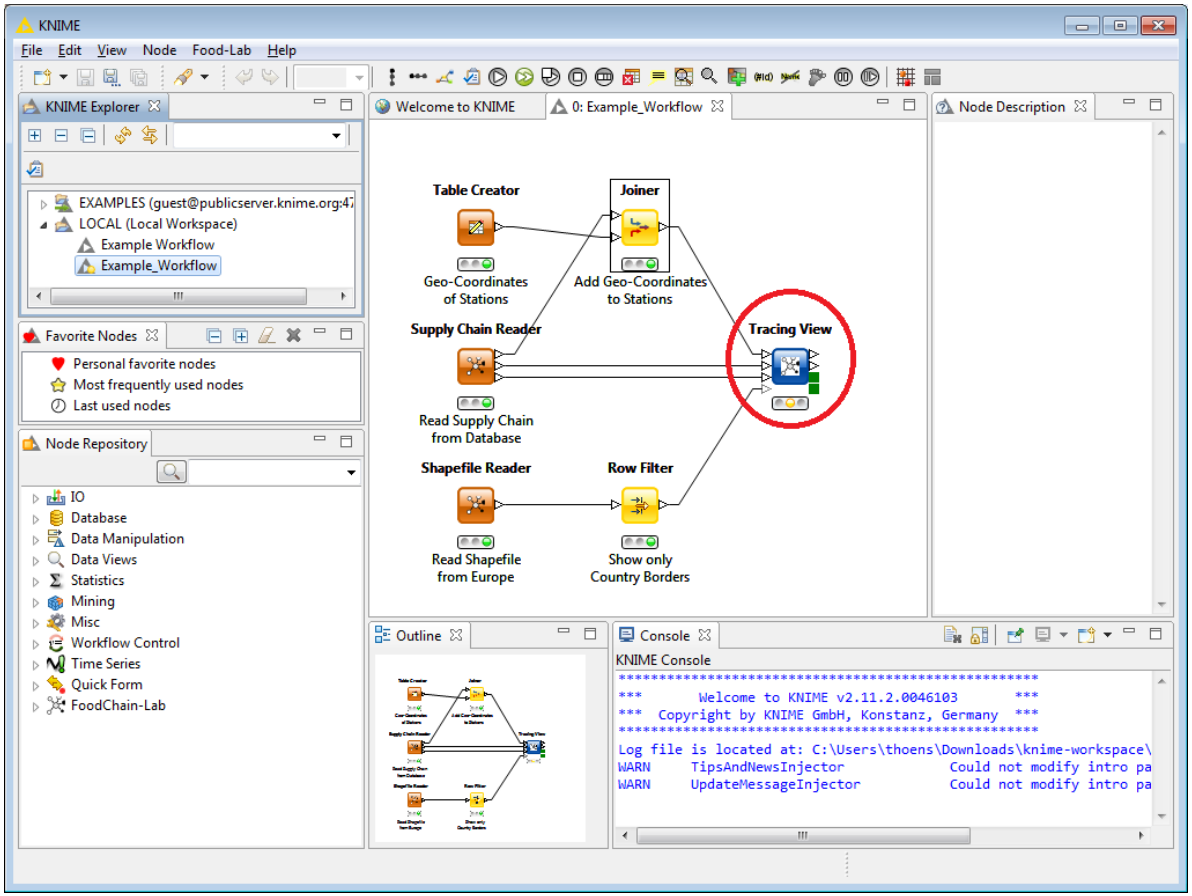
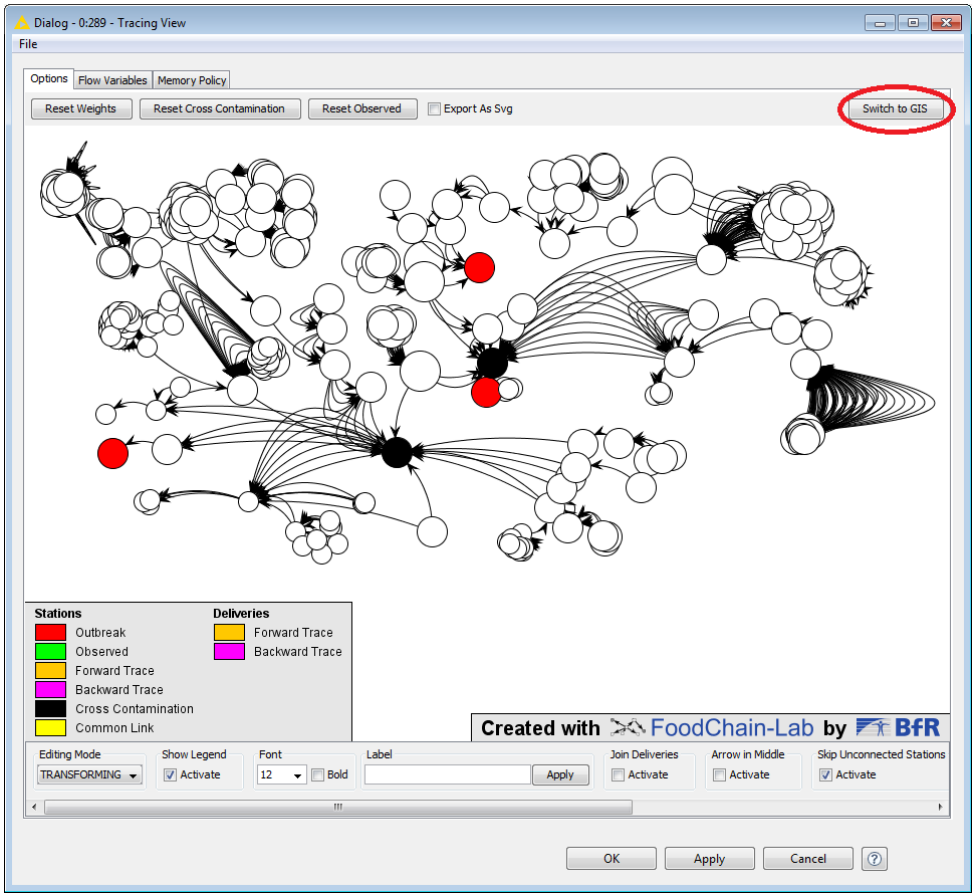
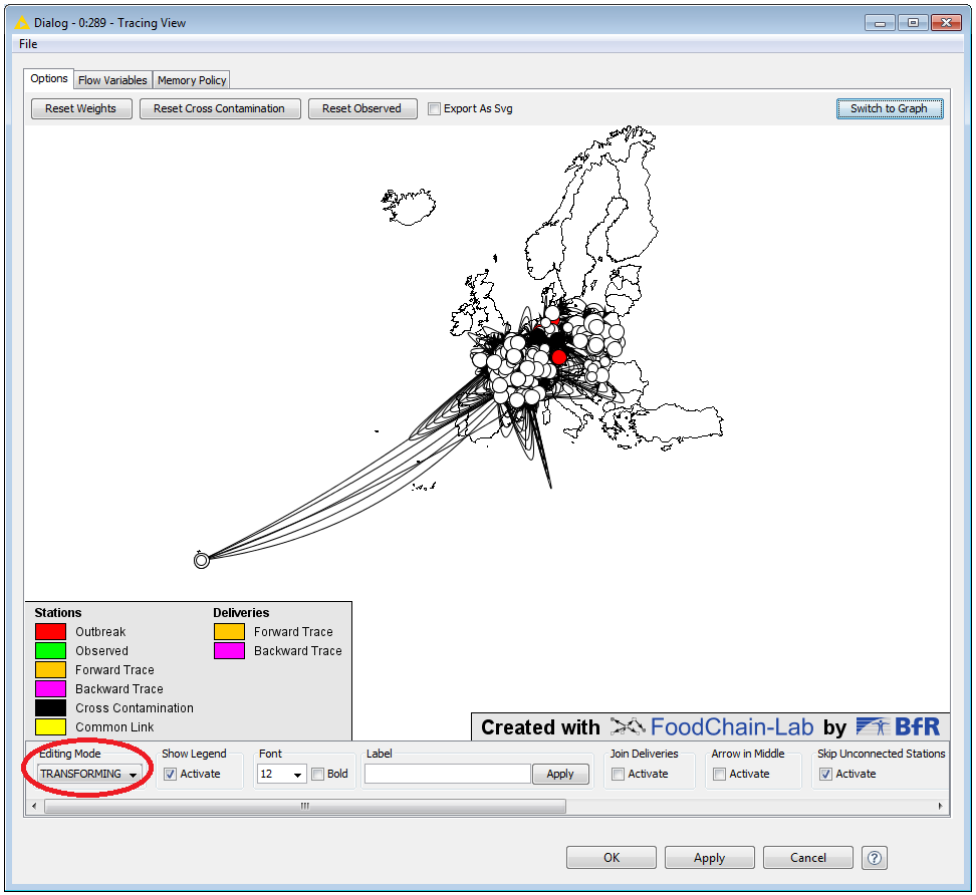
Geo-Visualization in FoodChain-Lab



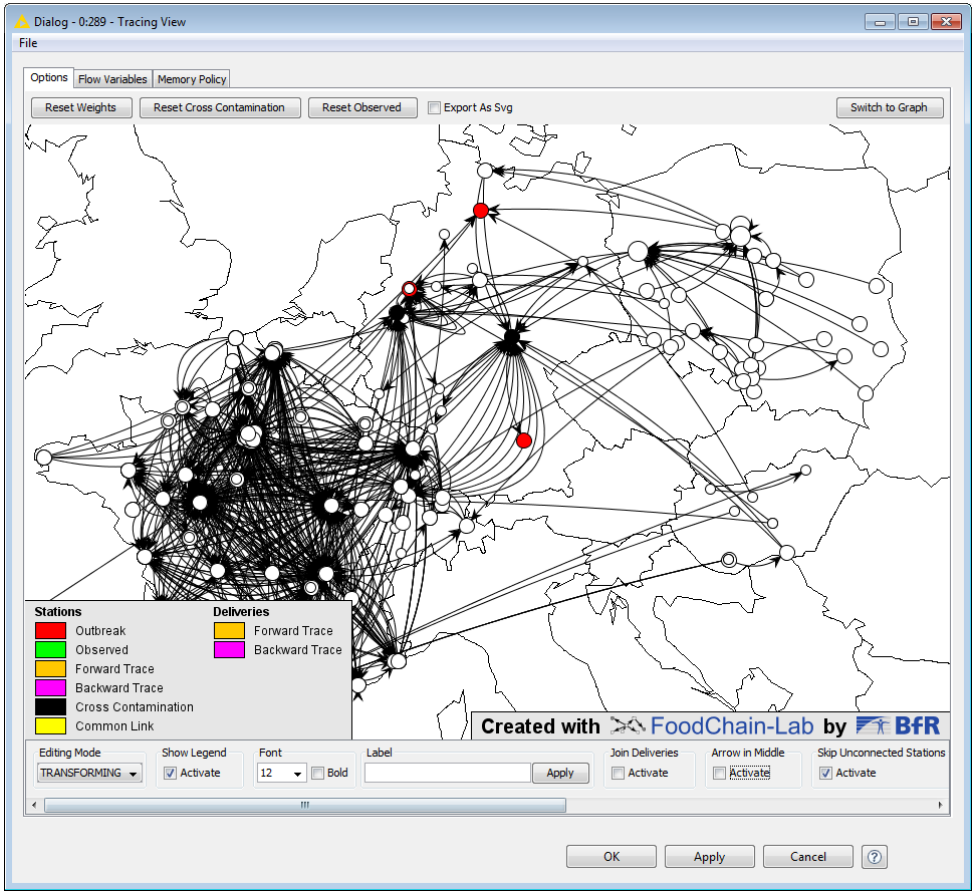
- Import the Example Workflow from `https://github.com/SiLeBAT/BfROpenLabResources/raw/master/GitHubPages/workflows/Example_Workflow.zip`.
- Open the **Tracing View** by double-clicking on it.



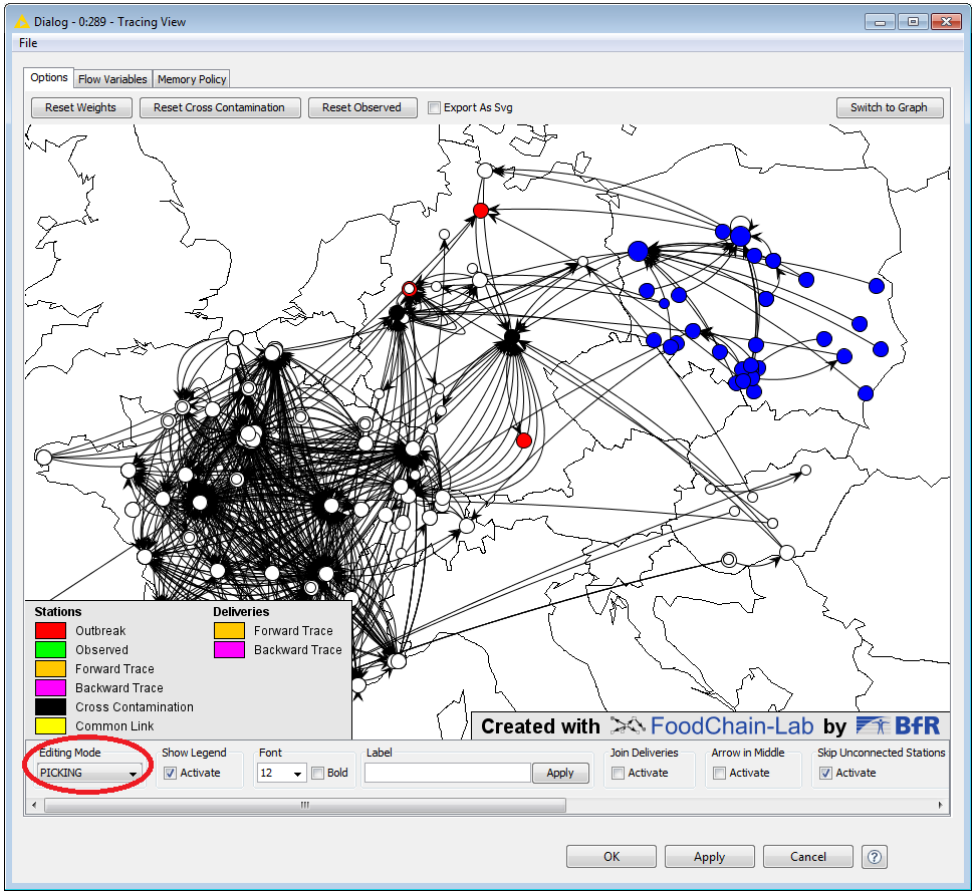
- Now you should see a graphical representation of the delivery network.
- To switch to the geographical representation click **Switch to GIS** in the upper right corner.



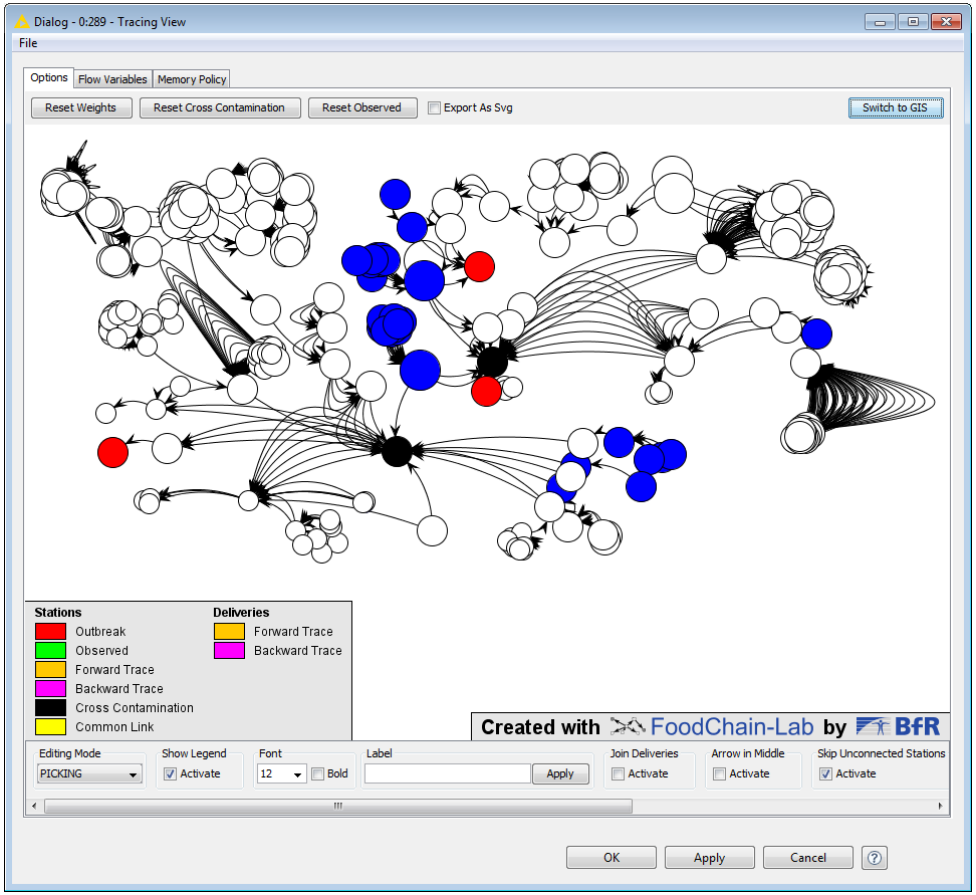
- To zoom to a certain area of the graph select "TRANSFORMING" as **Editing Mode** and zoom/move the graph by using the mouse wheel and the left mouse button (works as in Google Maps).



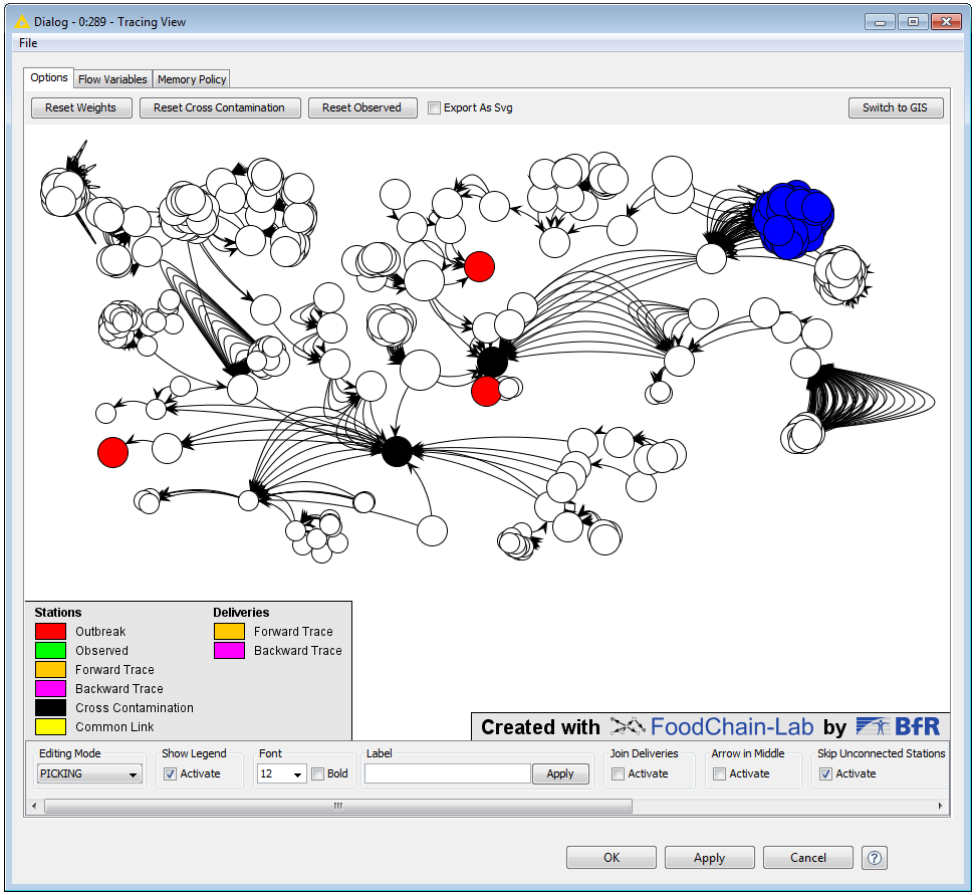
- Here you can see the deliveries in central Europe.



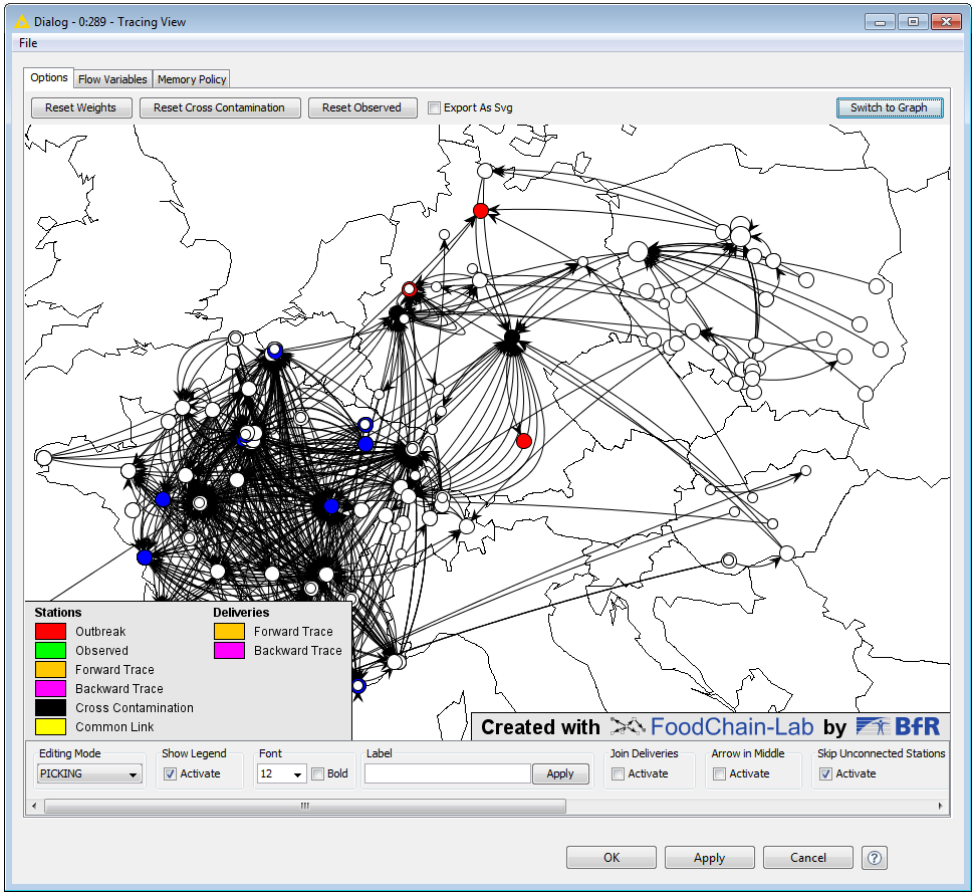
- We can now select certain stations based on geography.
- Select "PICKING" as **Editing Mode** and select all stations in Poland by dragging a rect around the stations.
- The selected stations are now colored blue.
- Switch back to the graphical view by clicking **Switch to Graph** in the upper right corner.



- The blue stations are the ones you selected in the geographical view, since changes you make in any of the view are automatically applied to the other view.
- That makes it easy to switch back and forth between both representations and use the benefits of both.



- Lets now select a certain "cluster" in the graphical view and see where the stations are in the geographical view.
- So select the "cluster" in the upper right corner and click **Switch to GIS**.



- As you can see the stations of the cluster are located all over France.
